United Kingdom

Learning objectives

- Design, implement, debug, and deploy simple full-stack web applications using Node.js and MongoDB for back-end, and React, HTML5 & CSS for front-end, and Git and GitHub for source control and collaboration.
- Allow migrants to represent themselves well in relevant job applications, both on paper, and in interviews.

Activities

- Live coding (teacher and student led), including student prediction and pair programming.
- Worked examples.
- Individual and small group exercises, and team projects
- Discussions and guidance
- Talks from the industry

After the training

Support the participants in getting relevant work: mock interviews, CV review, career advice, work experience on internal projects. Invitation to assist in the subsequent course.

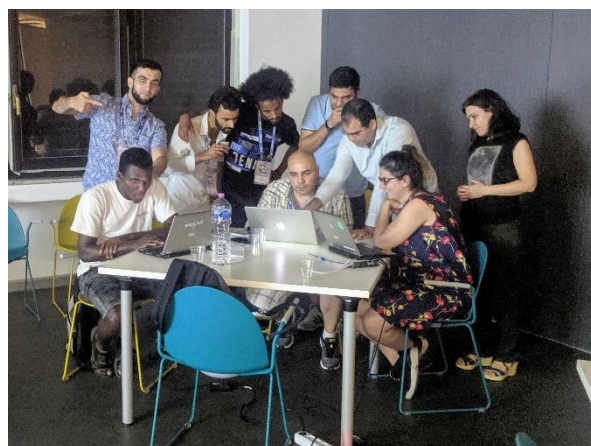

Rome	**May 2019 – January 2020**
180 hours of training	**20 participants**

Manchester	**November 2019 – August 2020**
180 hours of training	**15 participants**

About NewTalents4EU

NewTalents4EU project proposes to empower all refugees to program their future, making integration work now and more durably. Market-focused training schemes in coding/programming skills and enterprises networking were implemented across four EU countries, offering a skilled workforce in a demanding sector.
